### 190. Structural Steel Installation

WIC Name: LE/SI-en, WIC No.: 190.

All WORK required for the complete execution of Structural Steel Installation shall be included in the unit rate as specified in the Conditions of Contract and Exhibits A, B, C, D, E, F, G, H, I, J, K, L, M, N.

The unit rate shall be sub-divided into labour, material and equipment rates.

Further the following principal items shall be included in the unit rates:

- Any activities required for the preparation of work
- All QA / QC inspectinos as per project requirements
- Any HSE related measures and items, including sign boards, barricades etc.
- Cleaning of work area

### 190.10. Primary Structural Steel Erection / Installation

WIC Name: LE/SI-en, WIC No.: 190. 10.

Assignment to weight classes shall be done as follows:

Each single part which will be delivered to site shall be assigned to a weight class.

Only the specific weight of main profile (as specified in BoQ) shall determine the weight class independent from additional connected plates.

The weight of additional connected plates shall be included in the weight of assembly part in the determined weight class.

WIC Name: LE/SI-en, WIC No.: 190. 10.

**190.10.21. Plant Pipe Racks and Supporting structures: Structural Steel Erection of Primary Steel**

The unit rate covers the installation and all related measures described below of all kind of structural steel elements independent from their size and location.

Labour rates shall include:

- Any work required for the preparation of the installation, e.g. preparation / maintenance of the crane area and temporary laydown areas as well as access ways
- Preparation of erection precondition paperwork, method statement, Third Party inspection of lifting study
- Take-over, check items regarding visible damages caused by transport and registration into material management database
- Any manpower required for unloading of supplied pre-fabricated steel work and all related materials, stockpiling, loading, handling e.g. from warehouses or laydown areas to erection site, Lifting
- All surveying activities, incl. required paperwork
- Checking and acceptance of foundations and anchor bolts according to relevant specifications
- Any manpower required for intermediate storage / protection of structural steel
- Installation of structural steel as per specification and AFC erection drawings into final position incl. plumbing, leveling, packing, grinding, shimming and any final adjustments required to rectify fabrication errors
- Any manpower required for the transport, lifting, supporting, alignment, handling, cutting, bending at site
- Any bolting and/or welding activities
- All required tests, e.g. bolt tightening test, welding seam test with NDE for field welding etc.
- Touch up painting
- Final cleaning of erected structural steel

Material rates shall include:

Equipment rates shall include:

- All kind of scaffold, platforms and ladders required for the work
- Intermediate storage / protection of structural steel incl. supports
- Any equipment required for unloading of supplied pre-fabricated steel work and all related materials, stockpiling, loading, transport, handling e.g. from warehouses or laydown

- Intermediate storage / protection of structural steel incl. supports
- Any equipment required for unloading of supplied pre-fabricated steel work and all related materials, stockpiling, loading, transport, handling, e.g. from warehouses or laydown areas to erection site, lifting
- Any equipment required for the installation, transport, lifting, supporting, alignment, handling, cutting, bending, testing at site e.g. cranes, temporary supports, generators, trucks and trailers, welding machines

Exclusions

Following items will be compensated separately with regard to the corresponding BoQ item unit rate:

- Grouting

----------	--------------------	----------	-----	---------------------	----------------------

- provision of any equipment required for shaft and coupling alignment (e.g. dial indicators, laser optic alignment system, etc.)
- provision of any tools and equipment required for erection and inspection of the erected equipment acc. to specifications
- supply and Installation of timber or steel mats for load spreading on the ground
- Supply of all lifting gear, shackles, ropes, spreader bars, slings, etc. required for the lifting operations

## Exclusions:

- Hydrotesting of vendor supplied equipment --> vendor scope
- Installation of associated equipment like lube oil unit, seal gas unit, condensers, tanks, suction drum --> covered in respective static equipment chapter
- supply and installation of grouting after fixing the equipment in place --> to be included in Civil
- supply or installation of anchor bolts, chipping of foundations --> to be included in Civil

**220.20.20. Installation and final alignment of pumps, blowers and boxed fans with driver (motor or turbine) - SKID MOUNTED**

WIC Name: LE/SI-en, WIC No.: 220. 20. 20.

Skid Mounted Pumps are delivered with pumps, driver and baseframe (if applicable) as a pre-assembled skid. In addition to the note to chapter 220.20. pricing for this chapter shall include for SKID-MOUNTED pumps the following:

Labor Rate shall include:

- final alignment (motor, shaft, pump etc., i.e. alignment complete drive train)
- installation of pump skid
- uncoupling and coupling for motor test runs
- re-checking of correct alignment after final installation.

Material Rate shall include:

Equipment Rate shall include:

Exclusions:

- Installation of pumps >50t / 55 shtn --> to be included in chapter "Critical and heavy lifts"

### 230. Heavy Lifts and Installation

WIC Name: LE/SI-en, WIC No.: 230.

Heavy lifts are defined as follows:

- any lift of equipment which weighs more than 50 metric tons [t]

### 230.30. Mobilization and Demobilization of Heavy Lifting Equipment to SITE

WIC Name: LE/SI-en, WIC No.: 230. 30.

- All labour required for engineering work to prepare and submit permits and procedures for the transport (incl. import, export) of heavy lifting equipment to/ from construction site
- All labour, equipment and material for HSE measures (e.g. barricades, warning lights, etc.) and documentation for transport of heavy lifting cranes and equipment to/ from construction site
- All labour, equipment and material for temporary disassembly/ re-assembly of road signs and other structural restrictions along transport route and adaptation of transport route for mobilization/ demobilization of heavy lifting cranes and equipment to/ from construction site
- Provision and rental/cost for crane and all associated lifting equipment to/ from construction site (including tailing crane, tailing frame or any other suitable tailing device if upending of equipment from horizontal position is required)
- Equipment rate for all necessary auxiliary cranes, all equipment and tools for mobilization/ demobilization and transport of heavy lifting cranes and equipment to/ from construction site
- All labour, equipment and material required for mobilization/demobilization and assembly/disassembly of heavy lifting equipment
- Material rate for all consumables (lubrications, fuel, etc.) for transport of heavy lifting cranes and equipment to/ from construction site

Following shall be considered separately:

- Indirect cost
- Lifting of heavy equipment
- Installation/ mounting/ welding work of heavy equipment

#### 240.140. Handling + Prefabrication + Installation in Process Area

WIC Name: LE/SI-en, WIC No.: 240.140.

Labor Rate shall include:

- all necessary activities to reach the status of mechanical completion such as
- any intermediate loading, transport, unloading and storage required for the completion of the assigned scope
- disposal of any packing and temporary support material
- suitable packing of prefabricated spools (e.g. pipe caps, wooden paletts, shrink foil, seaworthy packing), loading and transport to designated laydown area at construction site/module yard or any other destination defined with due notice by COMPANY
- completion of all required design activities to obtain authority approval for transport (if required including route studies, marine warranty surveyor, static calculations, etc.)
- all paperwork required for the transport (COMPANY will assist in case transport crosses country borders)
- return of rental containers
- all measuring, marking, cutting, restamping, cleaning (inside and outside pipe) and temporary preservation during performance of the work (like caps)
- Installation and maintaining of all safety areas and installations for pressure testing according to specifications (especially for pneumatic tests)
- unlocking and locking of spring hangers and spring supports
- Preparation and analysis of water to be used for Hydrotesting (e.g. chloride content as specified) incl. required documentation of test results
- all rigging in place, fitting, aligning, temporary supporting, fixing of pipe or fitting in position
- fabrication, installation, dismantling of dummy spools, test spades, temporary supports required for pressure testing
- all bolting and unbolting for pressure testing
- supply, installation and replacement of temporary gaskets with

## 240.300. Bolt Ups/Flange Connections of Metallic Piping

WIC Name: LE/SI-en, WIC No.: 240.300.  
Compensation shall include bolt-ups between and to piping, equipment nozzle, inline item and shall apply to all types of flange connections including those with wafer-type inline items fixed between two flanges and any type, material and length of bolts and nuts.

## Price breakdown structure

**Project:** P1512021 **Kosice LG**  
**BoQ:** 07 **Mechanical installation\_issue 5\_20240430**

Ref. No.	Work Specification	Quantity	UoM	Unit Rate in EUR	Item Total in EUR
----------	--------------------	----------	-----	---------------------	----------------------

Labor Rate shall include:

- bolt ups of all types of flanges (raised face (RF), flat face (FF), tongue/groove (T/G), ring type joint (RTJ), male-female face (M/F) or fittings with special faces...), all types of flanges with a wafer item in between and all materials
- handling of bolts, studs, nuts and gaskets including temporary material
- measurement of roundness and angularity check of flange face
- if required correction works
- check for damages on flange face or gaskets before installation
- cleaning of flange face
- stress-free alignment of flanges incl. all activities to ensure a stress-free bolt up (e.g. opening and closing of support clamps)
- lubrication of bolts
- bolting of the flange connection with controlled torque (manually or hydraulic torquing)
- hydraulic bolt tensioning (if specified)
- carrying out of inspections as per inspection test plan

Material Rate shall include:

- lubrication material (as and if specified)
- temporary gaskets, bolts, nuts and other items for temporary fit up

Equipment Rate shall include:

- bolting machines/devices such as pneumatic screwdrivers, hydraulic torque wrenches, manual torque wrenches, hydraulic bolt tensioning equipment
- all other tools and machines required for bolt ups

Exclusions:

- bolting of pipe supports to pipe, steel structure or equipment --> to be included in respective chapter "Installation and handling of supports"
- handling of items between flanges like blinds, figure 8 blinds, wafer type valve --> to be included in in the respective chapter "Installation and handling of piping"

Methods of Measurement:

- bolt-ups will be compensated per piece [PC]; one bolt up is the connection of two flanges by tightening bolts and nuts
- Methods of measurement for all items are defined in Document &AA W-SK-2411

**240.310. Handling + Installation of Valves & Inline Items (excluding bolt up or welding)**

WIC Name: LE/SI-en, WIC No.: 240.310.

The term inline items refers to strainers, filters, venturi pipes, flame arrestors, baskets, bellows, flow meters etc. which do have a special function, but will be installed as part of the piping system.

All types of valves with no respect to connection method (flanged, welded or screwed) or valve function shall be considered hereunder.

Labor Rate shall include:

- carrying out of inspections as per inspection test plan
- receiving, unpacking, inspection, storage, marking, preservation, protecting, identification of materials provided by COMPANY
- all activities to ensure traceability and the respective documentation activities required
- any loading, intermediate transport, unloading and storage during construction
- handling and hauling from storage location to erection site, rigging in place, fitting, aligning, temporary supporting, fixing of pipe or fitting in position,
- all measuring, marking, restamping, cleaning (inside and outside item) and temporary preservation for transport (like caps)
- disposal of any packing and temporary support material
- preparation, updating and administration of pressure test packages and test P&IDs
- handling and administration of all issued construction documents
- installation of valve actuators
- lubrication of valve spindles if specified
- for Safety valves: including calibration and pop test at site or close-by (only after COMPANY's approval)

Material Rate shall include:

- lubricants
- all supporting material required to install the valve in the defined position

Equipment Rate shall include:

- all tools and machines required for the installation of the valves

### **240.320. Handling & Installation of Pipe Supports**

WIC Name: LE/SI-en, WIC No.: 240.320.

The term supports shall refer to bracket supports, guiding supports, sliding supports, (moment free) anchor supports, cantilever supports, U-Bolts, support pads, pipe (spring) hangers, spring supports and special pipe supports, all for insulated and uninsulated piping including all hold-down and guiding elements

Labor Rate shall include:

- carrying out of inspections as per inspection test plan
- all activities to ensure traceability and the respective documentation activities required
- any loading, intermediate transport, unloading and storage during construction
- disposal of any packing and temporary support material
- handling and administration of all issued construction documents
- handling and hauling from storage location to erection site, rigging in place, fitting, aligning, temporary supporting, fixing of support in position,
- all measuring, marking, bolting of pipe supports onto pipe and onto structural steel pipe racks or other supporting steel structures including drilling of required holes
- installation of support elements like PTFE sliding plates, insulation form parts
- fabrication and installation of any stops or guides welded to piping
- welding of pipe support elements (like axial stops, guides, sheer plates) and pipe supports to piping, steel structure or equipment
- inertizing and purging of the pipe (for stainless steel supports)
- removal of blocking pins and adjustment of spring hangers or spring supports

Material Rate shall include:

- supply of insulation material for filling of trunnion supports
- supply of material for stops and guides welded to piping
- if required lubrication for bolts and nuts

Equipment Rate shall include:

----------	--------------------	----------	-----	---------------------	----------------------

### 250. Non Destructive Testing

WIC Name: LE/SI-en, WIC No.: 250.

Labor Rate shall include:

- Provision of standard PSA for site staff
- Provision of (testing) devices includes customer clearance and / or similar third part approvals, if any
- Handling and transport of the items to be tested
- Mobilization and demobilization of manpower
- Initial cleaning, required preparation of the surface before testing, cleaning after testing
- Performing the tests according to specifications
- Evaluation and documentation of test results
- Provision of raw data if required
- Securing test area (if required)

Material Rate shall include:

- All consumable materials required for testing

Equipment rate shall include:

- Testing device including power source

Exclusions:

- re-testing, repairs and follow up of welds due to contractors fault shall not be compensated
- Scaffolding --> shall be included in chapter "Scaffolding"
- NDT required for welder qualification tests --> covered in Welding of Piping

Methods of measurement:

- Methods of measurement for all items are defined in document &AZ W-SK 2511 (EN)

### 250.10. RT - Radiographic Testing with radiation source Ir192 or Se75

WIC Name: LE/SI-en, WIC No.: 250. 10.

Labor Rate shall include:

- working in RT windows which are usually between 06:00 pm and 06:00 am and on holidays (in case no special facilities for NDT like a bunker are available)
- securing the test areas where required
- handling and transport of the items to be tested

### 260. Corrosion Protection

WIC Name: LE/SI-en, WIC No.: 260.

All requirements as per project specifications / Linde Standards, included in EXHIBIT E260, shall be adhered to.

Labor Rate shall include:

- Proper packing of materials for transportation (especially adherence to local laws and regulations when transporting paint)
- Any loading, intermediate transport, unloading and storage during construction between warehouse and construction site
- Checking of delivery conditions of material incl. checking of already applied prime, intermediate layers and top coat of pre-painted items and as required touch up of these on a reimbursable basis (in case damages were not caused by CONTRACTOR only)
- Disposal of any packing and temporary support materialEvaluation, procurement, delivery and storage of all corrosion protection material. Description about storage facilities shall be submitted and needs COMPANY's approval.
- Paint application on reference area for each painting system in accordance with EN ISO 12944.
- All measuring and marking
- Masking of sensitive surfaces and neighboring installations and facilities to avoid damages and contamination (e.g. flange faces, pipe ends, valve spindles, packings, field welds etc.)
- Required surface preparation including cleaning, de-rusting, removal of preservation coatings and drying
- All rigging in place, fitting, aligning, temporary supporting, fixing in position
- coordination of material flow with other contractors (e.g. piping installation CONTRACTOR)
- Application of paint system according to project specifications and local rules and regulations including but not limited to blasting, primer, intermediate layer and top coat.
- Painting of lables and application of stickers
- cleaning after completion of painting (i.e. removal of tapes, blowing out of pipes with dry air, etc.)
- Perform touch up for damages caused by CONTRACTOR (will not be reimbursed)
- Touch-up of surfaces initially left un-coated to allow for future works in that location (will not be compensated as touch up) (e.g. weld seams)

## Price breakdown structure

**Project:** P1512021      **Kosice LG**

Ref. No.	Work Specification	Quantity	UoM	Unit Rate in EUR	Item Total in EUR
----------	--------------------	----------	-----	---------------------	----------------------

- removal of any spillage of paint
- Carrying out of inspections as per inspection test plan
- Compilation of documentation (safety and technical data sheets of the painting manufacturer) with reference to the blasting and painting systems, for all blasting and painting material used on site and submittal to COMPANY for approval before starting any work
- Establishing a painting procedure covering all CONTRACTOR activities including testing and inspection and submittal to COMPANY for approval
- as-built documentation

Material Rate shall include:

- Provision of all blast material, paint, thinners, solvents
- Provision of suitable spacers, supports and packing material for transport
- Provision of material for protection of surrounding installations and facilities all other materials and consumables required

Equipment Rate shall include:

- Supply of all construction equipment required to perform the scope described above like small cranes, forklifts, trucks, hoisting equipment, slings, chainblocks, Small hand and electric tools including consumables, gauges, sandblasting equipments incl. blasting grit, rollers, brushes, compressor, airless spray gun, dry film thickness measurement device, surface roughness measurement device, etc.
- All provisions required to keep installation material dry and clean at any time
- All other machines and tools required
- all equipment and tools required for inspections as per inspection test plan

Exclusions:

- Scaffolding --> to be covered separately in chapter "Scaffolding"

ABBREVIATIONS:

EP - Epoxy Resin (2C)  
 EP-MIO- Epoxy Resin with Micaceous Iron Oxide  
 IMM - Inorganic Copolymer with Inert Multipolimeric Matrix  
 IOZ - Inorganic Ethyl Zinc Silicate  
 PUR - Aliphatic Polyurethane  
 Zn(R) - Inorganic Zinc Rich Primer  
 CS - Unalloyed or Low-Alloyed Carbon Steel

### 260.20. Corrosion Protection of Piping

WIC Name: LE/SI-en, WIC No.: 260. 20.

In addition to applicable statements in the remark to chapter 260.  
pricing for this chapter shall include the following:

Labor Rate shall include:

- Transfer of pipe identification numbers from bare pipe to finish painted surface

Methods of Measurement:

- Corrosion protection of piping shall be measured in square meter [m2] of the outer surface of piping
- Methods of Measurement for all items are defined in Document &AA-W-SK 2611 (EN)

### 260.20.160. Paint System C5.02

**BoQ:** 07      **Mechanical installation\_issue 5\_20240430**

Ref. No.	Work Specification	Quantity	UoM	Unit Rate in EUR	Item Total in EUR
----------	--------------------	----------	-----	---------------------	----------------------

**260.30. Corrosion Protection of Equipment**

WIC Name: LE/SI-en, WIC No.: 260. 30.

In addition to applicable statements in the remark to chapter 260.  
pricing for this chapter shall include the following:

Methods of Measurement:

- Corrosion protection of equipment shall be measured in square meter [m2] of the outer surface of the equipment without consideration of nozzles, manholes or other attached items
- Methods of Measurement for all items are defined in Document &AA-W-SK 2611 (EN)

**260.30.160. Paint System C5.02**

**260.30.160.50** WIC Name: LE/SI-en, WIC No.: 260. 30.160. 50

**Touch Up Paint System C5.02**

Touch up of paint system C5.02 - Only if NOT caused by CONTRACTOR

787.00	m2	.....	.....

----------------------	--	-------

**260.50. Inside blasting of piping**

WIC Name: LE/SI-en, WIC No.: 260. 50.

In addition to applicable statements in the remark to chapter 260.  
pricing for this chapter shall include the following:

Labor Rate shall include:

- Establishing and maintaining of all HSE measured specifically required for these activities
- Inside blasting of pipes and fittings specified by COMPANY
- Removal of all residues after blasting
- Recycling of blasting material
- Inspection and proof of full removal of inside coatings

Material Rate shall include:

- Blast material

## Price breakdown structure

Project: P1512021 Kosice LG  
BoQ: 07 Mechanical installation\_issue 5\_20240430

Ref. No.	Work Specification	Quantity	UoM	Unit Rate in EUR	Item Total in EUR
----------	--------------------	----------	-----	---------------------	----------------------

- All other materials and consumables required

Equipment Rate shall include:

- All blasting and cleaning equipment
- Special equipment for inside blasting of piping

Exclusions:

- Any regular cleaning of piping from e.g. rust preventing oil, mill scale, rust -> to be included in regular pipe installation and welding rates
- Blasting of piping which will be blasted and painted anyway --> to be included in Corrosion protection rates

Methods of Measurement:

- Methods of Measurement for all items are defined in Document &AA-W-SK 2611 (EN)
- inside blasting of piping shall be measured in linear meter [m] over all fittings and straight pipes

### 260.50.10. Inside blasting of piping

WIC Name: LE/SI-en, WIC No.: 260. 50. 10.

This activity shall only be performed on lines specifically specified by COMPANY and shall be applied for e.g. (but not limited to) removal e.g. inside rust prevention "Japanese Black" or mill scale residues

Ref. No.	Work Specification	Quantity	UoM	Unit Rate in EUR	Item Total in EUR
----------	--------------------	----------	-----	---------------------	----------------------

**280. Installation of internals and fillings**

**280.20. Installation of fillings**

WIC Name: LE/SI-en, WIC No.: 280. 20.

Please note: Installation of fillings usually takes place in equipment already erected. Access is typically only possible via manholes.

Labor Rate shall include:

- installation of all means required to establish safe working conditions at and inside the equipment (confined space working environment!, lighting, manhole watch, oxygen measurement, SCBA units (if required), ventilation of the equipment etc.)
- provide throughout the installation activities a manhole watch (if entering the equipment is required)
- Unloading of internals at temporary laydown area and secure storage (incl. bedding material or temporary supports)
- Reloading (incl. provision of suitable means of transport and all temporary fastening, supports and fixtures) and transport to installation location
- Removal of all packing material or preservation protection not required during or after installation
- provision and installation of appropriate measures and continuing preventive maintenance to protect internals against environmental influences like rain, cold, heat, dust, sand, dirt, corrosion as specified by fillings manufacturer and to avoid ingress of humidity into equipments
- Removal of all dirt, dust, mill scale, grease or other foreign matter inside equipment to be filled before, during and after installation to achieve required cleanliness for installation and operation
- temporary closing of all openings of equipment using suitable material (e.g. exhaust filters, plastic caps, foils, etc.) and later complete removal of temporary materials
- opening and closing of manholes/blinds as required to perform the work
- filling of equipment including multibed fillings
- all inspections as per inspection test plan

Material Rate shall include:

- supply of temporary closing materials

Equipment Rate shall include:

- any equipment required for a safe working environment like SCBA units, compressors, technical ventilation, rescue gear, etc.
- any equipment required to transport fillings from the laydown area to the installation location (including e.g. lifts, cranes, hoists, winches, elevators, etc. to the access manhole)

Exclusions:

- supply of internals --> will be supplied by COMPANY
- final box-up of equipment --> covered in chapter installation of equipment
- Exclusions (except stated differently when LS for complete

Material Rate shall include:

- raw perlite (only if inquired)
- any packing material required

Equipment Rate shall include:

- any pipe or hose lines connecting to the filling compressor or hopper
- expansion furnace including any consumables required (e.g. heating gas, etc.)

Exclusions:

- filling of perlite --> inquired separately in chapter 280.30.20.
- any machinery or equipment associated with the filling of perlite --> inquired separately in chapter 280.30.20.

Methods of Measurement:

- Nominal Volume to be filled in cubic meter [m3] of EXPANDED PERLITE (!!)

### 280.30.10. Material Supply of perlite

#### 280.30.10.35 Material supply of expanded perlite in big bags or silos in accordance with LS 152-08

ATTENTION: inquired QTY represents the nominal volume to be filled by EXPANDED PERLITE!

Additional top up after settling and material loss during filling shall be considered by CONTRACTOR.

5,341.50 m3 .....

**Total 280.30.10. Material Supply of perlite** .....

### 280.30.20. Filling of perlite

WIC Name: LE/SI-en, WIC No.: 280. 30. 20.

Please note: Filling of perlite usually takes place in equipment already erected. Access is typically only possible via manholes.

Labor Rate shall include:

- installation of all means required to establish safe working conditions (lighting, covering sheets, dust control measures, fall protection, safety devices for hose connections etc.)
- Recorded Training of workers in handling and filling the perlite
- Removal of all packing material or preservation protection not

required during or after installation

- provision and installation of appropriate measures to protect perlite against adverse weather conditions with a special focus on avoiding the ingress of humidity in the equipment or in the perlite itself
- opening and closing of manholes/blinds as required to perform the work
- Filling of equipment in stages to avoid creation of pockets or insulation voids (start filling through manholes at lower levels and proceed up as the filling level rises, max. distance between two levels 15m)
- all inspections as per inspection test plan

Material Rate shall include:

- supply of temporary closing materials
- supply of temporary filters to close roof openings during filling

Equipment Rate shall include:

- perlite filling equipment like hopper, dry-air blower for pneumatic transport of perlite including all piping, couplings, connections, hoses, funnels, etc.
- any equipment required to transport perlite to the installation location (including e.g. lifts, cranes, hoists, winches, elevators, etc.)
- any equipment required for a safe working environment

Exclusions:

- supply of perlite --> will be supplied by COMPANY or is inquired separately in chapter 280.30.10.
- scaffolding --> covered in chapter scaffolding

Methods of Measurement:
