1 Table of Contents

2	Application	2/1
2.1	Application	2/2
2.2	Features	2/2
3	Design	3/1
3.1	Packaging system / dimensions	3/1
3.2	Location of the modules in the module rack	3/2
3.2.1	Feeder unit	3/2
3.2.2	Central unit	3/5
3.3	Assignment of the modules depending on the degree of expansion	3/11
3.3.1	Assignment of the modules depending on the number of switching devices connected to the feeder unit and to the central unit:	3/11
3.3.2	Assignment of modules and connection units depending on the number of feeder units connected to the central unit:	3/11
3.4	Assignment of the switchgear interlock units to the bays	3/12
3.5	Ordering data for the examples in Figs. 3.2, 3.4, 3.5, 3.8	3/13
4	Technical Specifications	4/1
4.1	Technical specifications of the units	4/1
4.1.1	Inputs	4/1
4.1.2	Outputs	4/2
4.1.3	Power consumption	4/2
4.1.4	Test voltages, EMC tests	4/4
4.1.5	Mechanical ambient conditions	4/5
4.1.6	Climatic ambient conditions	4/5
4.1.7	Connection method	4/5
4.1.8	Degree of protection	4/6
4.1.9	Weight with maximum configuration	4/6
4.2	Technical specifications of the modules	4/7
4.2.1	Interface and control module (ABB)	4/7
4.2.2	Manual control module (FGB)	4/8
4.2.3	Input / output module (EAB)	4/9
4.2.4	Microcomputer module (BSF)	4/10
4.2.5	Transmitter / receiver controlling module (SAB)	4/11
4.2.6	Four-channel serial interface module (VES)	4/11
4.2.7	Power supply unit feeder unit 30 W (SV30)	4/12
4.2.8	Power supply module central unit 75 W (SV75)	4/13
4.2.9	Contact multiplier module (KVB)	4/15
5	Method of Operation	5/1
5.1	The program structure	5/1
5.1.1	Reading in the circuit—breaker position checkback signals into the feeder unit	5/2
5.1.2	Data exchange between the feeder unit and the central unit via the serial interface	5/2
5.1.3	Scanning of command inputs	5/3
5.1.4	Checking the interlock conditions	5/3
5.1.5	Output of switching commands	5/3
5.1.6	Performing test routines	5/4

5.2	Method of operation of the units	5/4
5.2.1	Normal operation	5/5
5.2.2	Operation without interlocking (S1 operation)	5/7
5.2.3	Feeder shut down	5/8
5.2.4	Command execution	5/9
5.3	Method of operation of the switchgear interlocking modules	5/12
5.3.1	Interface and control module (ABB)	5/12
5.3.1.1	Version supplied until 9.93	5/12
5.3.1.2	Version as supplied from 10.93	5/14
5.3.2	Manual control module (FGB)	5/16
5.3.3	Input / output module (EAB)	5/20
5.3.4	Microcomputer module (BSF)	5/23
5.3.5	SAB transmitter / receiver controlling module	5/28
5.3.6	Four-channel serial interface module (VES)	5/31
5.3.7	30 W power supply module (SV30)	5/33
5.3.8	75 W power supply module (SV75)	5/35
5.3.9	Contact multiplier module (KVB)	5/37
6	Preparation for Use	6/1
6.1	Packing	6/1
6.2	Transport	6/1
6.3	Checking the ratings	6/1
6.4	Installation	6/2
7	Operating Instructions	7/1
7.1	Safety precautions	7/1
7.2	Commissioning of new installations	7/1
7.2.1	Central unit	7/1
7.2.2	Feeder unit	7/4
7.3	Operation	7/7
7.4	Documentation as of 06.95	7/8
7.4.1	Single line diagram and switchyard overview	7/8
7.4.2	Central unit	7/10
7.4.3	Feeder unit	7/13
8	Mechanical Design	8/1
9	Maintenance	9/1
9.1	Checks	9/1
9.2	Systematic fault analysis and repair	9/1
9.2.1	Explanation of the "ready" lamps for the feeder and central units	9/1
9.2.2	Fault and operational displays	9/3
9.2.2.1	Explanation of each fault or operational display	9/3
9.2.2.2	Interpretation of fault displays F3 to F6 feeder / central unit	9/5
10	Storage	10/1
11	Repairs / Rapid Service	11/1
11.1	Module replacement	11/1
12	Accessories, Replacement Parts	12/1
